

Going deeper into the greenhouse effect!

1 Share your ideas with your group mates

Complete these questions searching for information on the internet and agreeing with your group mates. You can use these structures to help you.

What do you think about option (1)?

I think the correct answer is... And you? What do you think?

a) What 's the greenhouse effect? Find a definition and put the steps in the greenhouse effects in order (1-4).

- Some of the energy is reflected and the rest absorbed by the Earth's surface.
- But greenhouse gases trap most of it, keeping the planet warm
- Sun's radiation travels toward to the Earth
- The Earth emits heat back to the space. Some of this energy passes directly through the atmosphere.

b) Write the greenhouse effect consequences under these circumstances.

Without greenhouse effect	With natural greenhouse effect	With an increased greenhouse effect

c) What human activities contribute to the emission of greenhouse gases? Write at least 4 activities and the main gas produced in each one.

Human activity	Gas produced
